# Properties of Experimentation

# Network Research

Approaches	Problems
Live Network	Hard to manage, lengthy deployment, security risks
PlanetLab	Hard to manage, bad at modeling, not scalable
Simulation	Not generalizable, inaccurate
Emulation	Large overhead, kernel complexities

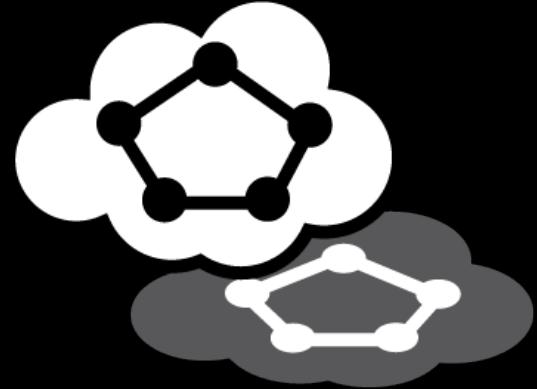

# Testbed Trade-offs

	Controllable	Reproducible	Scalable	Accuracy	Convenient
Live Network			X	X	
PlanetLab				?	
Simulation	X	X	X		X
Emulation	X				X
Shadow	X	X	X	?	X

# What is Shadow?

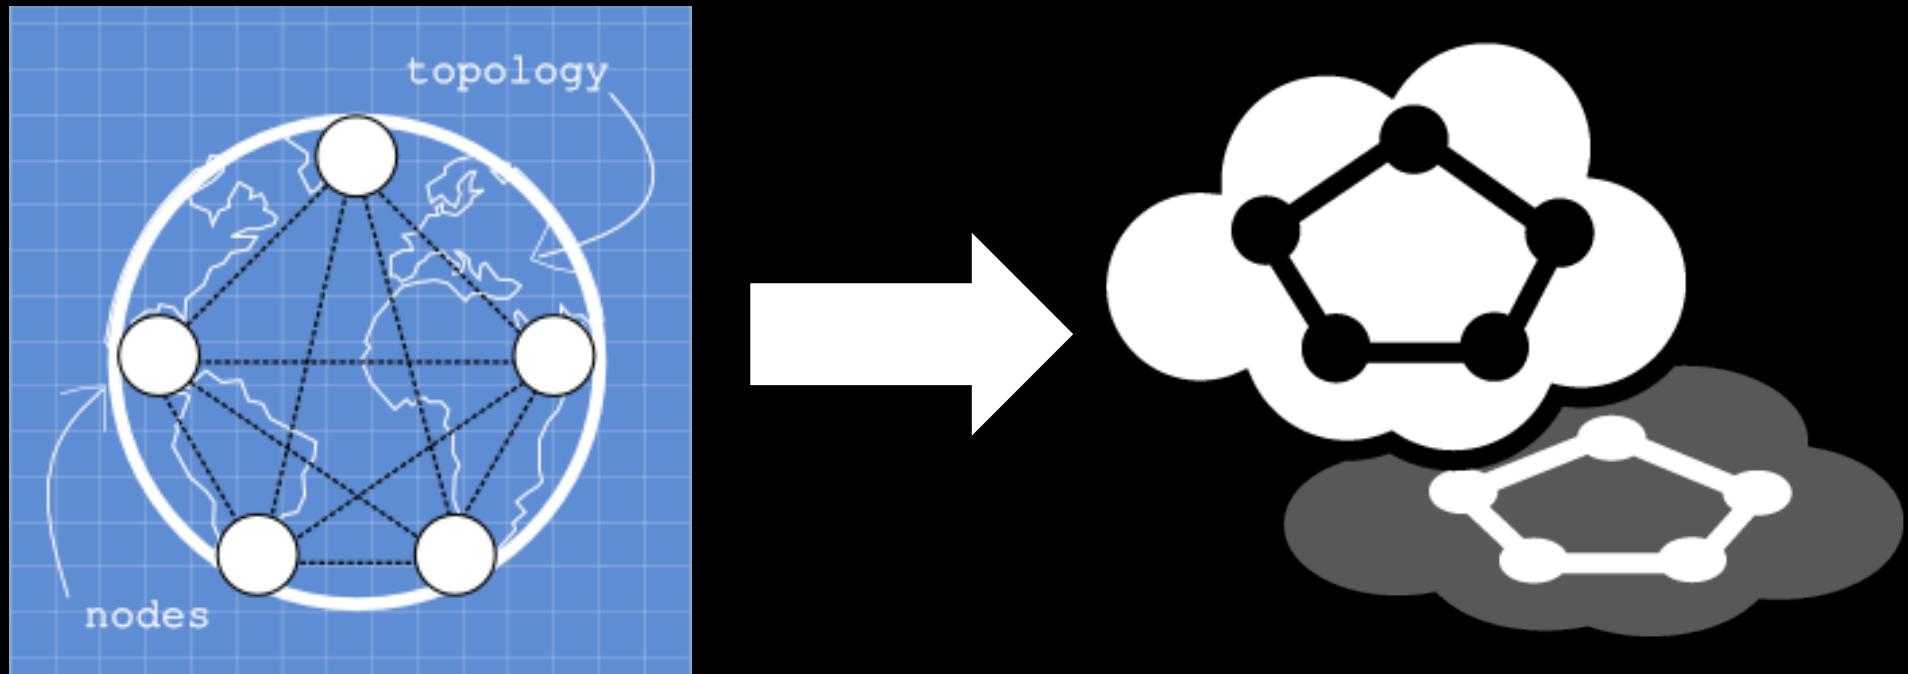

- Discrete event network simulator
- Runs **real** applications **without modification**
- Simulates time, network, crypto, CPU
- Models routing, latency, bandwidth
- Single Linux box without root privileges
